## ABOUT ME

---

Full Stack Developer with over 3 years of experience in backend, frontend, and cloud development. Specialized in Python, Node.js, and React, with strong expertise in microservices architectures, deployments on Azure, GCP (Vertex AI), and AWS, and Generative AI integration (LLMs, NLP, LangChain, RAG).

Recognized for transforming business needs into scalable, measurable, and secure technical solutions, with a strong focus on impact and reliability.

## TECHNOLOGY STACK

---

### Backend

Python (FastAPI), Node.js (NestJS), .NET Core, C#, TypeScript

MongoDB with Mongoose ODM, SQL (MySQL, Oracle) and NoSQL (Redis)

JWT Authentication, WebSockets, REST APIs, Class Validators, RSS Parsing

### Frontend

React, Vue.js, Angular, HTML5, CSS, JavaScript, Bootstrap, Vite

Tailwind CSS, Zustand, Framer Motion, responsive and optimized SPA development

### Databases & Optimization

SQL and NoSQL with experience in Redis and vector databases (Pinecone, OpenSearch)

Unique indexes, data denormalization, query optimization, and advanced pagination

### Cloud & DevOps

Azure, GCP, AWS (ECS/EKS, CloudWatch)

Vertex AI and Cloudinary for multimedia file management

Automated deployment, monitoring, and high availability setups

### Generative AI

LLMs and NLP applied to data and financial news analysis

Integration with LangChain and RAG for recommendation and semantic search systems

Automated content processing and intelligent pipelines using generative models

### Architecture & Patterns

Microservices, dependency injection, Repository pattern

Custom middleware, cron jobs, asynchronous notifications

Design of scalable and multi-tenant architectures

### Methodologies & Best Practices

Agile/Scrum, Jira, Confluence

Endpoint testing, code reviews, and Git/GitHub version control best practices

Process automation, permission control, and role-based security

## WORK EXPERIENCE

---

### Full Stack Developer / Cloud Engineer – Arms (2023–2025)

- Designed and developed full-stack applications using TypeScript/Node.js (NestJS), .NET, and Python, applying SOLID principles and Clean Architecture to ensure code maintainability and scalability.
- Contributed to the development, testing, and deployment of machine learning models on Vertex AI to predict invoice payment times per tenant, improving financial forecasting accuracy.
- Scaled microservices deployed on Azure and GCP, leveraging Vertex AI and Cloud Monitoring for high availability, load balancing, and continuous monitoring.
- Built intelligent data pipelines integrating LLMs for analysis of critical workflows and data validation, reducing financial data analysis time by 40% and improving insight quality for corporate clients.
- Implemented a distributed workflow system with Redis + BullMQ, enabling multi-tenant internal process customization with real-time scalability and fault tolerance.
- Developed an automation module in Azure using LLMs/NLP to process emails — downloading, classifying, and extracting key information for internal systems — saving the operations team ~20 hours per week by eliminating repetitive tasks.
- Integrated external APIs and corporate ERPs (e.g., SAP HANA) via REST/gRPC and custom services, optimizing data exchange between systems, ensuring transactional consistency, and reducing human errors.
- Designed advanced security architecture, including encryption in transit and at rest, granular authentication/authorization, audit logging, and disaster recovery (DRP) strategies.

### Full Stack Developer (Internship) – Cloud & Web Applications (2023)

- Deployed a multi-tenant cloud application for large-scale data management, ensuring scalability, performance, and security.
- Designed a core rules engine that enabled clients to configure custom workflows, reducing incident rates by 30%.
- Collaborated in Agile environments using Jira and Confluence, actively participating in sprint planning, daily stand-ups, and retrospectives.
- Managed version control in GitHub, creating pull requests and performing code reviews to maintain high code quality and consistency.

## MY PROJECTS

---

### [Streakfinder.com](https://streakfinder.com) / Full stack - Generative AI Project: Investment Management Platform & Community Forum

- Stack: React + Vite, NestJS, MongoDB, Tailwind, JWT, WebSockets, APIs REST, Zustand, Framer Motion, Gemini/LLMs
- Developed a full-stack investment management platform with an advanced community forum (+1,000 concurrent interactions) and a real-time interactive dashboard.
- Implemented a modular/microservices architecture (Auth, Forum, News, Notifications, Users) and a scalable backend using NestJS + MongoDB.
- Integrated LLMs (Gemini/OpenAI) for automated financial news analysis and generation of AI-driven investment insights.
- Designed asynchronous notification systems, nested comments, and social features (profiles, badges, likes/bookmarks).
- Optimized system performance through efficient queries, advanced pagination, lazy loading, and data denormalization.
- Outcome: a fully functional, scalable platform built for business growth — combining community engagement, real-time data, and AI-based recommendations.

## EDUCATION

---

### IMMUNE TECHNOLOGY INSTITUTE

- Bachelor's Degree in Software Engineering

### CERTIFICATIONS

---

- [Certificado en Asp.Net Core](#)

### INFORMACIÓN ADICIONAL

---

- Spanish (Native), English (Fluent – several years living abroad)
